Protokol audit terdistribusi untuk transaksi yang tidak dapat dilacak

Thesis Title (English)

Distributed auditing protocol for untraceable transactions

Thesis Description

Data integrity is a property that cloud service providers (CSPs) have focused on. The data integrity checking is assigned to third-party auditors (TPAs) to avoid data storage in CSPs. Nevertheless, this type of mechanism is vulnerable to many threats, including insider/outsider adversaries. Moreover, several threats with its presence, such as deleting, changing, or destroying the recorded data. The study presents a blockchain-based distributed auditing (BB-DA) protocol auditing confidential/untraceable transactions in a distributed manner. The BB-DA protocol provides message/transaction confidentiality, user privacy, and security
